Begin Your Journey

<1 min

Catherine learned and applied a lot during the first two weeks of her job. She:

- Explored churn data using SQL
- Explored Codecademy's datasets
- Analyzed data using pandas, a Python library
- Visualized data using Matplotlib, a Python library

Now it's your turn. By the end of the Data Science Path, you'll be able to do all of the things that Catherine can do. We will also be adding new content every month.

Good luck and happy coding!
